

1.0 GENERAL INFORMATION

WAREHOUSE AUTOMATED INVENTORY SYSTEM (WAIS)

1.0 GENERAL INFORMATION

General Information section explains in general terms the system and the purpose for which it is intended.

1.1 System Overview

Warehouse Automated Inventory System is a web application comprise of a php programming language for Administrator. The system is use for storing and fast retrieving of inventory information.

1.2 Organization of the Manual

The user's manual consists of four sections: General Information, System Summary, Getting Started and Using the System.

General Information section explains in general terms the system and the purpose for which it is intended.

System Summary section provides a general overview of the system. The summary outlines the uses of the system's hardware and software requirements, system's configuration, user access levels and system's behavior in case of any contingencies.

Getting Started section explains how to access the warehouse automated inventory system. The section presents briefly the system menu.

Using The System section provides a detailed description of system functions.

2.0 SYSTEM SUMMARY

WAREHOUSE AUTOMATED INVENTORY SYSTEM (WAIS)

2.0 SYSTEM SUMMARY

System Summary section provides a general overview of the system. The summary outlines the uses of the system's hardware and software requirements, system's configuration, user access levels and system's behavior in case of any contingencies.

2.1 System Configuration

Warehouse Automated Inventory System Application operates on computers with Windows Operating System, Mac OS and Linux. It is compatible with Windows XP and higher versions. The application requires some web browsers like Google Chrome, Safari, Opera, Mozilla Firefox and other web browsers. After having a specific web browser, you must secondly have an application name XAMPP.

2.2 User Access Levels

Only registered users are able to access the system. There are two types of user level access in the Warehouse Automated Inventory System, specifically the Non-Uniformed and the Uniformed users. The former can access all the functions including the settings, report generation, monitoring and system configuration while the latter is only limited to some functions.

2.3 Contingencies

In case of power outage, the system cannot perform system transactions. It is advised that the system is not capable in saving data while experiencing power outage.

3.0 GETTING STARTED

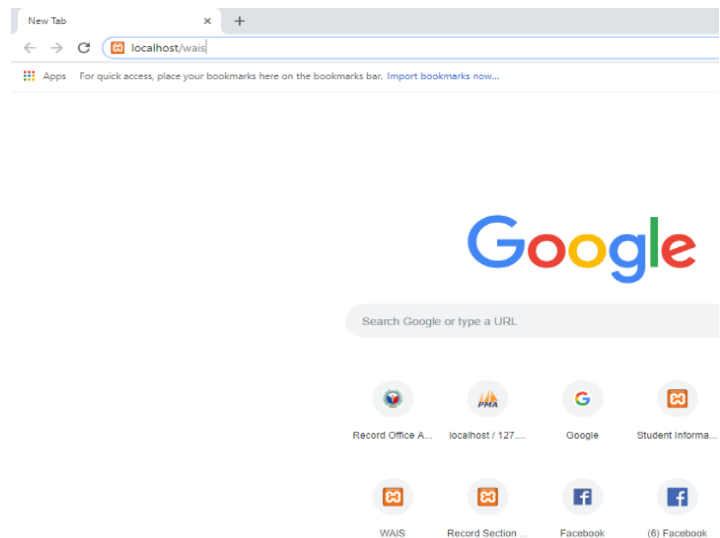

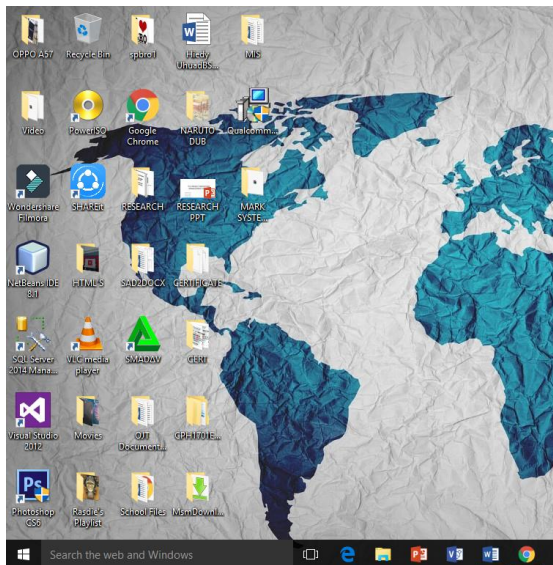

WAREHOUSE AUTOMATED INVENTORY SYSTEM (WAIS)

3.0 GETTING STARTED

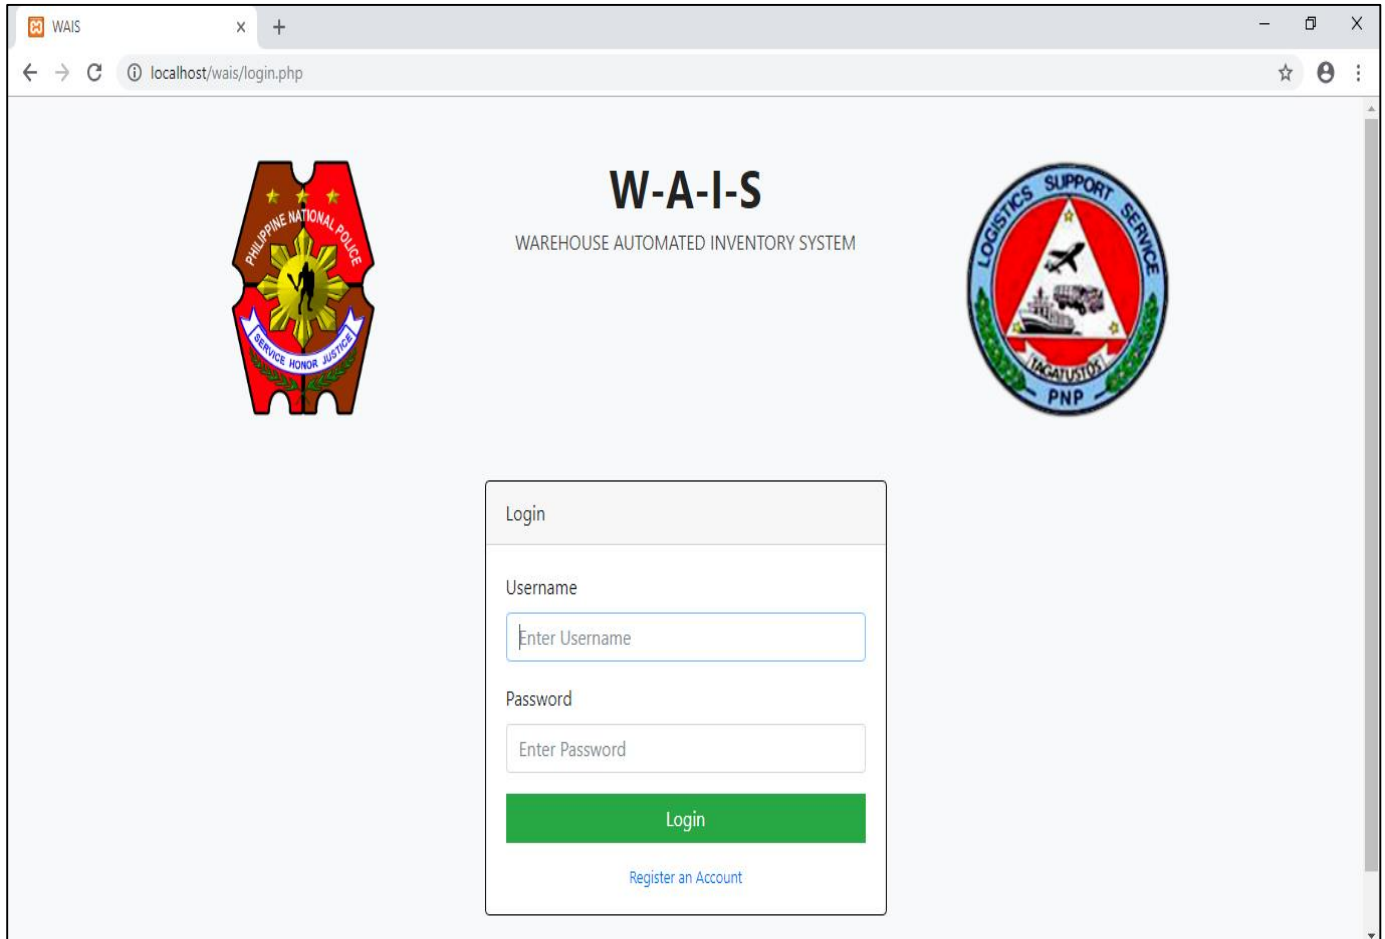

Getting Started section explains how to open or access the system for the server and the client users. The section presents briefly system menu.

3.1 Opening Warehouse Automated Inventory System for the Server

To open the Warehouse Automated Inventory System, just select a specific web browser then open it. After opening the web browser, simply type it to the url in your browser “localhost/WAIS” and lastly just press the enter key.

The login form will open as shown below

WAIS

localhost/wais/login.php

Password

Login

[Register an Account](#)

3.2 Lan Connection Configuration for the Client

To connect the client to the system server, first thing is the server and the client must be connected to a router or Wi-Fi device. Next is to check or to identify the server's IP address. In able to identify the server's IP address, you must open the cmd by simply typing "cmd" in the desktop search and when the cmd console appears, type "ipconfig". After typing the ipconfig, get the IP address in the IPV4 displayed from the cmd, then open your web browser and add a "/" in the url then paste the copied IP address.

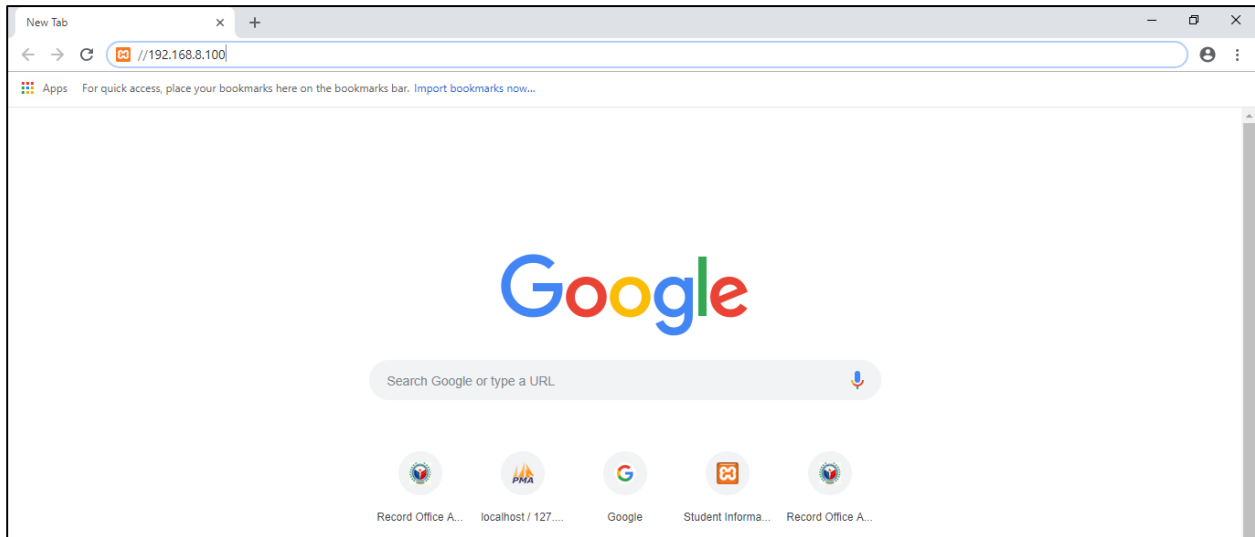

```

Command Prompt
Microsoft Windows [Version 10.0.10240]
(c) 2015 Microsoft Corporation. All rights reserved.
C:\Users\Hiedy Uhuad>

Wireless LAN adapter Wi-Fi:

    Connection-specific DNS Suffix  . : 
    Link-local IPv6 Address . . . . . : fe80::4dd5:9149:cf24:98f3%9
    IPv4 Address. . . . . : 192.168.43.182
    Subnet Mask . . . . . : 255.255.255.0
    Default Gateway . . . . . : 192.168.43.1
  
```

Then in your browser's url just type this “//” then paste the copied ipv4.

After making this step, your client access is good to go.

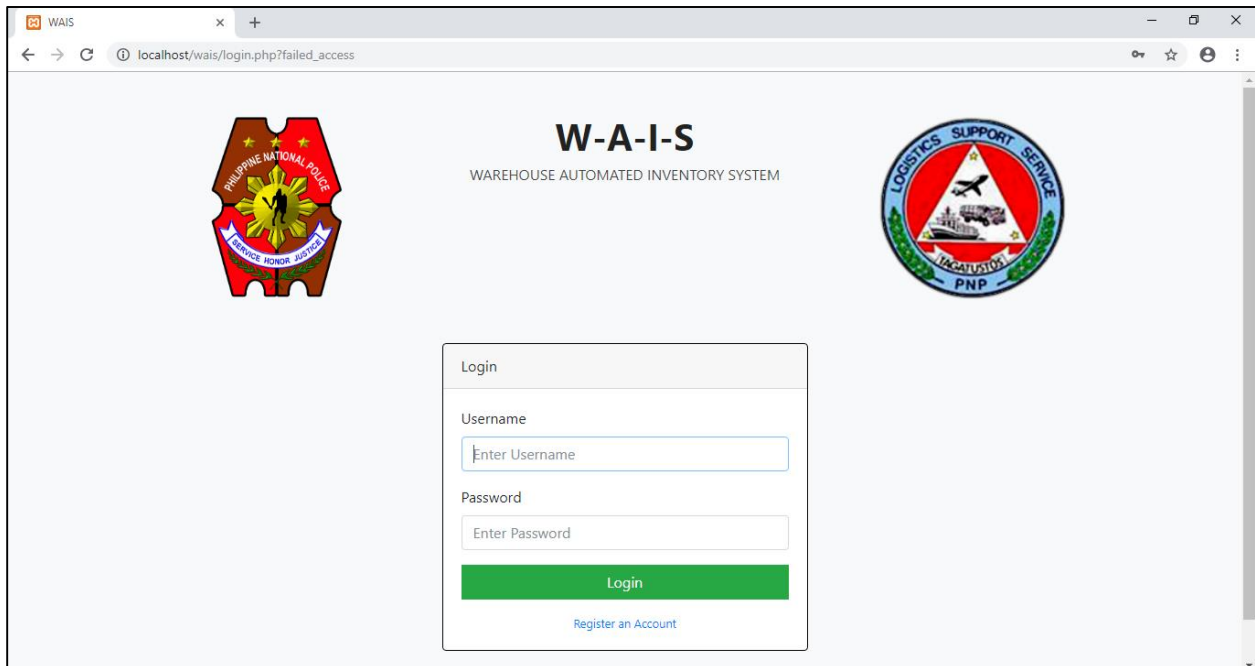

4.0 USING THE SYSTEM

WAREHOUSE AUTOMATED INVENTORY SYSTEM (WAIS)

4.0 USING THE SYSTEM

4.1 LOGGING-IN THE SYSTEM

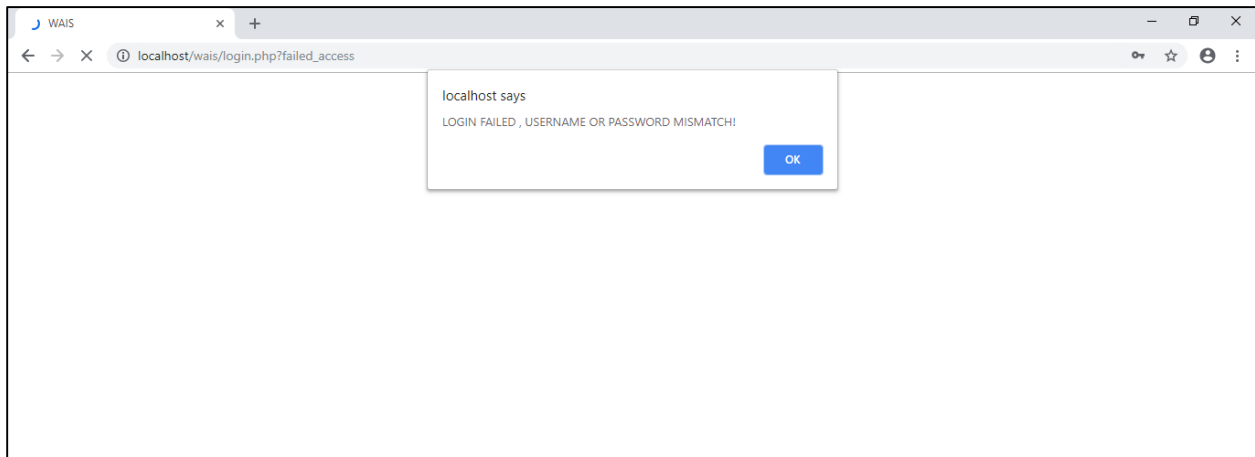

The default username is “Admin” and the default password is “Admin”. To login, type the username and password and click Login.

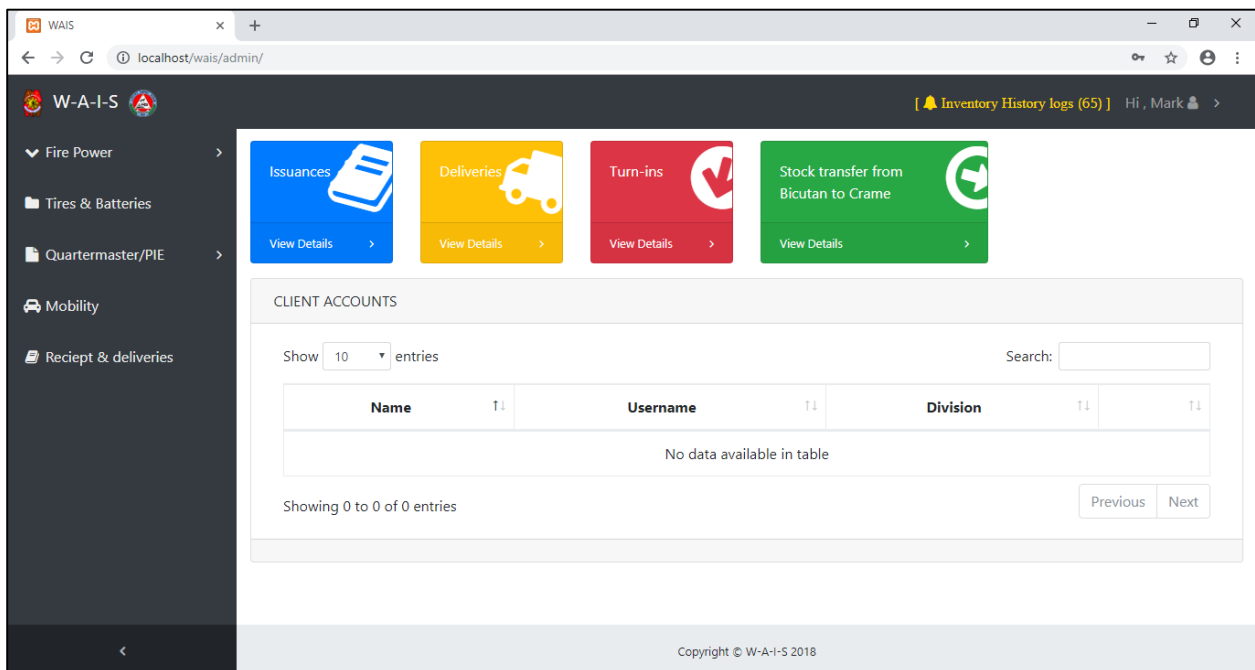

The screenshot shows a web browser window with the address bar displaying 'localhost/wais/login.php?failed_access'. The page content includes the PNP logo on the left, the LSS logo on the right, and a central login form. The form has a title 'Login' and contains the following elements:

- Username:** A text input field with the placeholder text 'Enter Username'.
- Password:** A text input field with the placeholder text 'Enter Password'.
- Login:** A green button with the text 'Login'.
- Register an Account:** A blue link text located below the Login button.

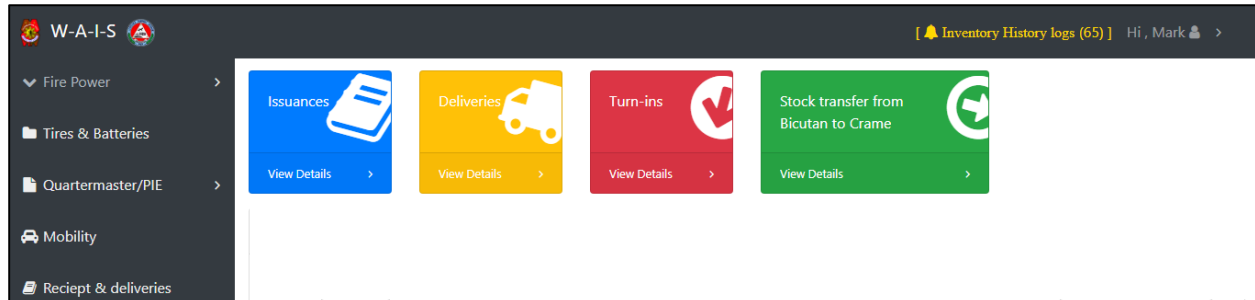

If the username or password is incorrect, a notification will appear as shown below.

If the Administrator's username or password is correct the main panel will open as shown below.
